The Syllabus: A 12-week assignment to write a Wikipedia article
For instructors

Instructor Basics: How to use Wikipedia as a teaching tool
This brochure covers key Wikipedia policies and structure you'll need to understand, best practices on article selection and working with the community, and sample grading structures.
wikiedu.org/instructorbasics

Case Studies: How instructors are teaching with Wikipedia
This publication highlights assignment design from instructors throughout the United States and Canada. Each instructor explains how he or she used Wikipedia in the classroom or how he or she graded the assignment.
wikiedu.org/casestudies

Online Orientation for Educators
All instructors are highly encouraged to complete the online orientation before planning a syllabus. It will introduce you to the culture and rules of Wikipedia, demonstrate the basics of editing, and walk you through the process of creating an assignment plan and a course page on Wikipedia.
enwp.org/WP:EDUCATOR

For students

Editing Wikipedia
A general introduction to contributing to Wikipedia: the basic rules, how to write in encyclopedic style, and how to use and interpret wiki markup.

Using this syllabus

Before you begin
This sample syllabus document is the third in a series of brochures about how to use Wikipedia as a teaching tool. Before you delve into the specifics of syllabus construction, you may want to consult the “Instructor Basics” and “Case Studies” brochures to get a better idea of best practices, what learning objectives the assignments can achieve, and how you might want to grade a Wikipedia assignment. You are also highly encouraged to complete the online orientation for educators.

This document provides a full-term sample syllabus for a major Wikipedia writing assignment, incorporating many of the best practices for such projects. You can use it as a starting point for your own Wikipedia assignments, or take bits and pieces to adapt to your course.

This sample syllabus is for a 12-week assignment to write English Wikipedia articles. For syllabi using other Wikipedia assignments, see the Case Studies brochure.

Understanding icons we use

Handouts
Throughout this brochure, we’ll reference handouts you should pass out to your students. All of these handouts are linked from the web version of this brochure: education.wikimedia.org/syllabus

Shortcuts
Shortcuts to important pages on Wikipedia are listed throughout this syllabus as |shortcut WP:EDUCATORS|. To use one, simply type the shortcut into the search bar on Wikipedia and press enter.

Milestones
Experienced instructors say it is crucial for students who are going to be editing Wikipedia to become comfortable not only with the markup, but also the community. Requiring milestones throughout the term will acclimate students to the site and head off procrastination. Instructors who do not set up these milestones throughout the term usually have bad experiences with their assignments.
12-week syllabus timeline

Wikipedia assignments work best when you introduce them early in the term, since the students need to acquaint themselves with the technology. Knowing what they are preparing themselves for makes learning the ins and outs of Wikipedia relevant.

Try to integrate your Wikipedia assignment with the course themes. Engage your students with questions of media literacy and knowledge construction throughout your course.

Online student training

The interactive online training for students introduces the Wikipedia community and how it works, demonstrates the basics of editing and walks students through their first edits, gives advice for selecting articles and drafting revisions, and covers some of the ways they can find help as they get started. It takes about an hour and ends with a certification step that you can use to verify that students completed the training. | shortcut WP:STUDENT

enwp.org/WP:STUDENT
**Week 1**

**Wikipedia essentials**
When you're introducing your class and going over the syllabus, be sure to let students know they'll be working on Wikipedia this term. This can be a good time to talk about their preconceived notions of Wikipedia and see if any students have edited in the past.

**In class**
› Overview of the course
› Introduction to how Wikipedia will be used in the course
› Handout: “Editing Wikipedia” brochure (available online or in print from the Wiki Education Foundation)

**Week 2**

**Editing basics**
It is important to get students editing Wikipedia right away so that they become familiar with wiki markup ("wikisyntax" or "wikicode"). Students also have the option of using the what-you-see-is-what-you-get VisualEditor for editing articles, but they will still need to know wiki markup to use Talk pages. The best way to teach students this is to assign them to complete the online training for students on Wikipedia.

**In class**
› Basics of editing
› Anatomy of Wikipedia articles, what makes a good article, how to distinguish between good and bad articles
› Tips on finding the best articles to work on for class assignments
› Handouts: “Using Talk Pages” handout and “Evaluating Wikipedia” brochure

**Assignment (due Week 3)**
› Create a User page, and click the “enroll” button on the top left of your course page.
› Complete the online training for students. During this training, you will create an account, make edits in a sandbox, and learn the basic rules of Wikipedia. | shortcut [WP:STUDENT]
› To practice editing and communicating on Wikipedia, leave a message for a classmate on their User Talk page.

**Milestone**
› All students have Wikipedia user accounts and are listed on the course page.

---

**Your Wikipedia course page**
Before your class begins, you'll need to create a course page on Wikipedia. Course pages are typically used to explain—to both students and the Wikipedia community—the details of your Wikipedia assignments, to keep track of which students are in the class and which articles they are working on, and to ask questions and discuss problems. For details on how to set up a course page, take the Online Orientation for Instructors | shortcut [WP:EDUCATOR].
Exploring the topic area

It is critical for students to begin researching their Wikipedia topics early in the term. Finding topics with the right balance between lack of prior good Wikipedia coverage and available literature from which to build new Wikipedia coverage can be tricky. As an alternative to assigning students to propose Wikipedia topics to write about, you may wish to prepare a list of appropriate non-existent or underdeveloped articles ahead of time. This requires more preparation but gets students to the point of researching and writing their articles sooner.

In class

› Handouts: “Choosing an article” and “How to get help”

Assignment (due Week 4)

› Critically evaluate an existing Wikipedia article related to the class, and leave suggestions for improving it on the article’s talk page.

› Research and list 3–5 articles on your Wikipedia user page that you will consider working on as your main project. Ask your instructor for comment.

Using sources

As they start using sources to improve Wikipedia articles, it is especially important for students to understand Wikipedia’s policies on plagiarism and copyright violation. Student generally know that copying whole paragraphs or sentences from sources constitutes plagiarism. But many don’t know about—or think they can get away with—subtler forms of plagiarism, such as using shorter phrases without attribution or beginning from a copied text and simply rewording it while leaving the structure and meaning intact (i.e., close paraphrasing). Any form of plagiarism or copyright violation is likely to result in students’ work being removed from Wikipedia, and it probably also violates your school’s honor code policies.

In class

› Handouts: “Citing sources on Wikipedia” and “Avoiding plagiarism on Wikipedia”

Assignment (due Week 5)

› Add 1–2 sentences of new information, backed up with a citation to an appropriate source, to a Wikipedia article related to the class.

For next week

› Instructor evaluates students’ article selections, by week 5.

Getting help

When things go wrong—students’ articles are challenged, students get into arguments with other editors, or you or the students are simply unsure about how to solve a problem—you should seek out help immediately. If there is a Wikipedia Ambassador working with your class, try asking him or her first. You can also try the Teahouse | shortcut [WP:TH], a friendly space for new editors, the Wiki Education Foundation Classroom Program Manager, or post a concern and request for help on the education noticeboard | shortcut [WP:ENB].

You’re the expert

Applying your own expertise to Wikipedia’s coverage of your field will be key to a successful assignment. You understand the broader intellectual context where individual topics fit in, you can recognize where Wikipedia falls short, you know—or know how to find—the relevant literature, and you know what topics your students should be able to handle. So your guidance on article choice and sourcing is critical for both your students’ success and the improvement of Wikipedia.
Choosing articles
By this week, ideally, you have evaluated the students' article choices and given them feedback, helping them to choose articles that are appropriate for the assignment. Because students often wait until the last minute to do their research or choose sources unsuited for Wikipedia, we strongly suggest that the students put together a bibliography of materials they want to use in editing the article which can then be assessed by you and other Wikipedians.

In class
› Discuss the range of topics students will be working on and strategies for researching and writing about them.

Assignment (due Week 6)
› Select an article to work on, removing the rest from your User page. Add your article to the class's course page.
› Compile a bibliography of relevant reliable sources and post it to the Talk page of the article you are working on. Begin reading the sources.

Drafting starter articles
Once students have gotten somewhat of a grip on their topics and the sources they will use to write about them, it's time to start writing on Wikipedia. You can assign them to jump right in and edit live or start in their own sandboxes. There are pros and cons to each approach.

Pros and cons to sandboxes: Sandboxes make students feel safe because they can edit without the pressure of the whole world reading their drafts or other Wikipedians altering their writing. However, sandbox editing limits many of the unique aspects of using Wikipedia as a teaching tool, such as collaborative writing and incremental drafting. Spending more than a week or two in sandboxes is strongly discouraged.

Pros and cons to editing live: Editing live is exciting for the students because they can see their changes to the articles immediately and experience the collaborative editing process throughout the assignment. However, because new editors often unintentionally break Wikipedia rules, sometimes students' additions are questioned or removed.

In class
› Talk about Wikipedia culture and etiquette, and (optionally) revisit the concept of sandboxes and how to use them.
› Q&A session with instructor and/or Wikipedia Ambassadors about interacting on Wikipedia and getting started with writing.

Assignment (due Week 7)
› If you are starting a new article, write a 3–4 paragraph summary version of your article—with citations—in your Wikipedia sandbox.
If you are improving an existing article, write a summary version reflecting the content the article will have after it's been improved, and post this along with a brief description of your plans on the article's talk page.
› Begin working with classmates and other editors to polish your short starter article and fix any major issues.
› Continue research in preparation for expanding your article.

Milestone
› All students have started editing articles or drafts on Wikipedia.
Moving articles to the main space

Whether students are starting new articles or expanding existing articles, it’s critical to get them working live on Wikipedia as soon as possible. Short summary versions for new articles (and short existing articles that have been expanded five-fold) are great starting points for working live in the main space.

**In class**

› Handout: “Moving out of your sandbox”

**Assignment (due Week 8)**

› Move sandbox articles into the main space.

› Optional: For new articles or qualifying expansions of stubs, compose a one-sentence “hook,” nominate it for “Did you know,” and monitor the nomination for any issues identified by other editors.

› Begin expanding your article into a comprehensive treatment of the topic.

---

Building articles

At this point, many students will have ‘gotten it’, and have a clear understanding of how to move forward. From there, the most important thing is giving feedback, both on the work they’re doing—what is missing, what sources could be used to improve it, whether the balance is appropriate—and on how to keep within Wikipedia’s guidelines, particularly Neutral Point of View | shortcut [WP:NPOV](https://en.wikipedia.org/wiki/Neutral_point_of_view) and No Original Research | shortcut [WP:NOR](https://en.wikipedia.org/wiki/No_original_research).

Other students may have stumbled with some element of getting their initial work live on Wikipedia. This is the key point to identify where students are having trouble—whether from negative reactions from other editors, technical hang-ups, problems finding good sources and using them appropriately, plagiarism, or something else. This is a good time to do a quick scan (at least) of what each student has contributed so far.

**Workshop in class or outside of class**

› Demo uploading images and adding images to articles.

› Share experiences and discuss problems.

› Handouts: “Illustrating Wikipedia: A guide to contributing content to Wikimedia Commons” and “Evaluating Wikipedia” (handed out originally in week 2)

**Assignment (due Week 9)**

› Expand your article into an initial draft of a comprehensive treatment of the topic.

› Select two classmates’ articles that you will peer review and copy-edit and sign on as their peer reviewer on the course page. (You don’t need to start reviewing yet.)
**Week 9**

**Getting and giving feedback**
Collaboration is a critical element of contributing to Wikipedia. For some students, this will happen spontaneously; their choice of topics will attract interested Wikipedians who will pitch in with ideas, copy-edits, or even substantial contributions to the students’ articles. Wikipedia Ambassadors who take a strong interest in the topics students are working on can make great collaborators. In many cases, however, there will be little spontaneous editing of students’ articles before the end of the term. Fortunately, a class full of fellow learners is a great pool of peer reviewers. You can make the most of this by assigning students to review each others’ articles soon after full-length drafts are posted, to give students plenty of time to act on the advice of their peers.

**In class**
› As a group, have the students offer suggestions for improving one or two of the students’ articles, setting the example for what is expected from a solid encyclopedia article.

**Assignment (due Week 10)**
› Peer review two of your classmates’ articles. Leave suggestions on the article Talk pages.

› Copy-edit the two reviewed articles.

**Milestone**
› All articles have been reviewed by others. All students have reviewed articles by their classmates.

**Rating Wikipedia articles**
The initiative to improve the quality of all articles has led Wikipedians to introduce a rating system (summarized below) that describes the progression from Stub to Featured Article. Encourage your students to familiarize themselves with this rating system and use it when doing peer reviews of each others’ articles. Students should keep in mind that B-class and C-class articles on Wikipedia are not equivalent to a traditional “B” or “C” class work in academia. Good Article and Featured Article are only attainable through a challenging peer-review process on Wikipedia, and only the most advanced students should contemplate submitting their work to these processes.

<table>
<thead>
<tr>
<th>Rating</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>FA</strong></td>
<td>The article meets the featured article criteria <a href="https://en.wikipedia.org/wiki/Wikipedia:Featured_articles">shortcut WP:FACR</a> and has gone through the FA candidates process <a href="https://en.wikipedia.org/wiki/Wikipedia:Featured_articles">shortcut WP:FAC</a>. Achieving FA status is rare, although not unprecedented, for Wikipedia class projects.</td>
</tr>
<tr>
<td><strong>GA</strong></td>
<td>The article meets the good article criteria <a href="https://en.wikipedia.org/wiki/Wikipedia:Good_articles">shortcut WP:GACR</a> and has gone though a successful good article nomination <a href="https://en.wikipedia.org/wiki/Wikipedia:Good_articles">shortcut WP:GAN</a>. Good articles are challenging, but possible, for classes that engage with Wikipedia throughout the term. Leave more time for review and revision of GAs are your goal, since it typically takes several weeks before a nominated article receives a review.</td>
</tr>
<tr>
<td><strong>B</strong></td>
<td>The article is mostly complete and without major issues, but requires some further work to reach good article standards. This level of quality is realistic for good students who work hard on their Wikipedia assignments and work on articles that are not too broad.</td>
</tr>
<tr>
<td><strong>C</strong></td>
<td>The article is substantial, but is still missing important content or contains a lot of irrelevant material. Your students can do better than this, but it will take effort.</td>
</tr>
<tr>
<td><strong>Start</strong></td>
<td>An article is developing, but is still incomplete and may require further reliable sources. Without feedback and guidance from the instructor, this is the typical level of quality achieved by students. It’s also, approximately, the typical level of quality of a random Wikipedia article longer than a few paragraphs.</td>
</tr>
<tr>
<td><strong>Stub</strong></td>
<td>The article contains only a very basic description of the topic, from a single sentence up to a few paragraphs. (Articles marked as stubs may actually have improved beyond stub status.)</td>
</tr>
</tbody>
</table>
**Week 10**

**Responding to feedback**
At this point, students should have produced nearly complete articles. Now is the chance to encourage them to wade a little deeper into Wikipedia and its norms and criteria for great content. You'll probably have discussed many of the core principles of Wikipedia—and related issues you want to focus on—but now that they’ve experienced first-hand how Wikipedia works, this is a good time to return to topics like neutrality, media literacy, and the impact and limits of Wikipedia. Consider bringing in a guest speaker, having a panel discussion, or simply having an open discussion amongst the class about what they have done so far and why (or whether) it matters.

**In class**
› Open discussion of the concepts of neutrality, media literacy, and the impact and limits of Wikipedia.

**Assignment (due Week 11)**
› Make edits to your article based on peers’ feedback. Prepare for an in-class presentation about your Wikipedia editing experience.

**Week 11**

**Class presentations**
Having students explicitly reflect on their experiences with Wikipedia, through presentations and/or reflective essays, can help draw out and solidify what they’ve learned about Wikipedia in particular and media literacy and research more generally. Such assignments, when they include explicit summaries or documentation of what students did or tried to do on Wikipedia, can also serve as the lens for evaluating and grading students’ Wikipedia work.

**In class**
› Students give in-class presentations about their experiences editing Wikipedia.

**Assignment (due Week 12)**
› Add final touches to your Wikipedia article.
› Write a reflective essay (2–5 pages) on your Wikipedia contributions.

**Week 12**

**All assignments due**
You made it!

**Milestone**
› Students have finished all their work on Wikipedia that will be considered for grading, and have submitted reflective essays.
This is a basic grading scheme appropriate for a Wikipedia assignment similar to this one. For more ideas on how to grade Wikipedia assignments, see the grading rubrics section of the “Instructor Basics” brochure.

## Sample Grading Structure

In grading a “research and write an article” type of assignment, the following grading rubric has been successful:

<table>
<thead>
<tr>
<th>Weight</th>
<th>Component</th>
</tr>
</thead>
<tbody>
<tr>
<td>5% each (x4)</td>
<td>Participation grade for early Wikipedia exercises</td>
</tr>
<tr>
<td>10%</td>
<td>Participation in class blog or class discussions</td>
</tr>
<tr>
<td>10%</td>
<td>Peer reviews and collaboration with classmates</td>
</tr>
<tr>
<td>50%</td>
<td>Quality of your main Wikipedia contributions</td>
</tr>
<tr>
<td>10%</td>
<td>Reflective essay</td>
</tr>
</tbody>
</table>

student grade
Ready to teach with Wikipedia?
The Wiki Education Foundation supports instructors in the United States and Canada who are interested in assigning their students to contribute content to Wikimedia projects as part of their coursework. We’ll ensure your assignment design will work with Wikipedia, help you get set up with a course page on Wikipedia, and find support for your students as they edit Wikipedia for the first time.

For more information, visit wikiedu.org or email us at contact@wikiedu.org
